

Upgrade your heating system
and **save up to £235*** per year
on your fuel bills.

If your boiler's over 10 years old, it may not be as efficient as it could be.

Why should I consider changing my boiler?

Older boilers can be as little as 60% efficient and even many comparatively modern boilers are still only 70-75% efficient. Compare that to A-rated condensing boilers that are more than 90% efficient.

What makes a condensing boiler so efficient?

Band	Efficiency
A	90% and above
B	86% – 90%
C	82% – 86%
D	78% – 82%
E	74% – 78%
F	70% – 74%
G	Below 70%

Condensing boilers work by recovering the waste heat which is expelled through the flue system of a non-condensing boiler and passing it through a second heat exchanger where it extracts additional heat.

With a boiler that's 10 years old or more, which doesn't have the benefit of today's condensing technology, as much as 30%* spent on fuel for your heating and hot water is wasted. It could make a big difference to your household energy bills, saving you money and help to reduce your carbon footprint at the same time.

*Source Energy Saving Trust

Protecting the environment

If everyone in the UK with gas, oil or LPG (bottled gas) powered central heating installed a condensing boiler, we would cut CO₂ emissions by around 6.7 million tonnes per year, saving £1.3 billion on our energy bills – enough energy to heat nearly 1.9 million homes for a year*.

What are the savings?

Energy prices are forecast to rise by 25% in the future. By increasing the efficiency of your heating system you can help mitigate these costs.

EXAMPLES OF SAVINGS:

- ◆ Replacing an old G-rated boiler with a modern A-rated boiler can save you up to **£235 per year***
- ◆ A pilot light alone costs around **£70 per year**
- ◆ Systems with the latest digital heating controls can **save up to 18%** per year on your heating costs

You may qualify for up to **£700** of grant funding!

£400 Boiler Scrappage Scheme

Subject to availability, a **£400 grant** may be available under the Government 'Boiler Scrappage Scheme' if you and your boiler meet the following criteria:

- ◆ You are a homeowner living in an owned or privately rented home in England
- ◆ Your existing boiler is G-rated, is the main boiler used to heat the home and is in working order
- ◆ Homeowners (including tenants) over 60, need **not** have a boiler that is in working order

£300 Warm Front Rebate

If you are over 60, not in receipt of any benefits and own or privately rent your home, you may be

eligible for an **additional £300 rebate** towards replacing an inoperable system or installing a new central heating system where there is none existing at the property.

Get a FREE survey today!

Call 0800 043 5690 today to arrange a **FREE, no-obligation survey** of your home's energy requirements to accurately assess your home's heating needs. You will be given expert guidance from professional surveyors and, if your existing boiler fulfils the requirements, assistance in applying for grants and rebates.

High-quality installation

All heating systems are professionally installed by major national installation contractors using fully certified Gas Safe Registered engineers.

- ◆ As standard, we fit Worcester Bosch boilers that are the industry leaders for efficiency and reliability (*other makes of boilers can be fitted as the customer requests*)
- ◆ These boilers come with a 5 year warranty and additional service plans are available
- ◆ All systems receive a post-installation inspection to ensure everything is working satisfactorily and you fully understand how to use the heating controls

What next?

Who should I contact?

To arrange an appointment for a surveyor to undertake a **FREE, no-obligation survey** of your home's energy requirements call Street Energy on **0800 043 5690**.
